

School of BES

# Open Research: OSF

Susi Zajitschek

- Reproducibility and transparency  
→ credible science
- Irreproducible findings:  
"reproducibility crisis"
- Open practices: promote  
collaboration, efficiency,  
public trust
- Funders: increasingly mandate  
openness

## Open Research in the School of Biological and Environmental Sciences

This guide aims to promote the adoption of open research best practices. It provides resources and guidance to enhance the transparency and robustness of research findings by encouraging practices like open access publishing, preprints, open peer review, open educational resources, and open research data.

By embracing these principles, we can improve research integrity, facilitate validation and reproduction of work, prevent duplication and misconduct, and foster a collaborative and inclusive research culture that drives innovation and addresses global challenges.

# Collaboration

- Sharing data
- Sharing code
- Sharing drafts
- Sharing versions

# OSF – Open Science Framework

Center for  
Open Science

- non-profit
- Free, open-source platform

Supports  
research  
lifecycle

- Planning to publication

Project  
Management

- File organisation
- Sharing
- Version control

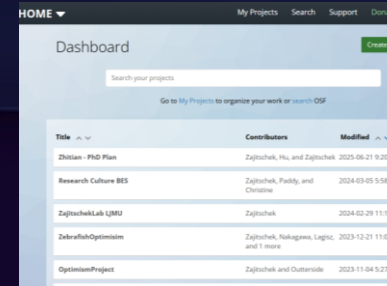

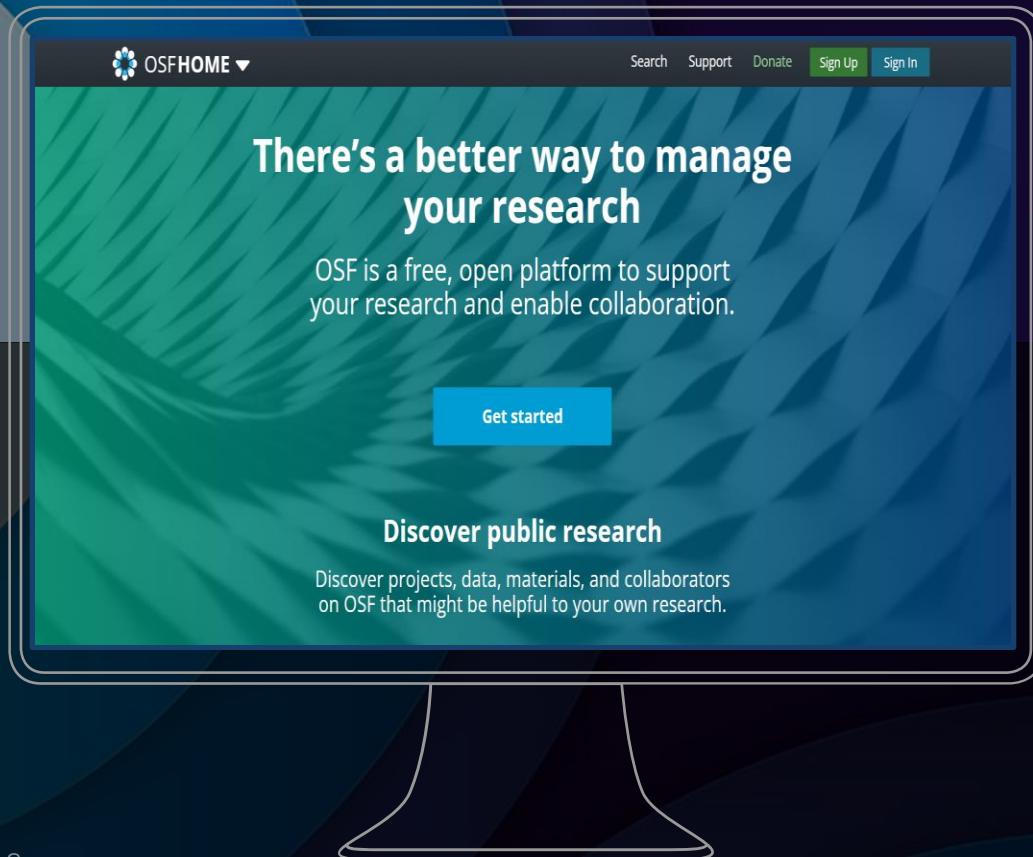

Combined  
funding  
sources

- Preservation fund: 50yrs + accessibility

# OSF.io

## Home screen

## Key Features

- Projects and components
- File storage
- Version control
- Collaboration

## Preprints & Pre-registration

### Study plan / methods:

- Documented
- Pre-Reg: Peer-reviewed
- Decouples study design from outcome

# OSF in practise

## Individual project

Manage Thesis  
Analysis pipeline  
Admin project

## Lab/Group space

Centralise  
resources  
Share protocols  
Store shared files

## Collaborative space

Open access: data,  
code, protocols  
Link preprints,  
papers,  
supplements

# Tour...

## Wiki

Project overview  
Documentation  
Key information

## Files

Uploads  
Linked services

## Contributors

Manage  
permissions

## Activity logs

Automatic  
tracking

# OSF and FAIR Principles

## Findable

Projects and  
data indexed  
DOIs  
available

## Accessible

Public  
sharing  
Embargo  
options

## Interoperable

Supports  
metadata  
Common file  
types

## Reusable

Wikis  
structured  
templates

## <sup>11</sup>Publications

Link preprints, published papers supplements

# Pre-registration and Preprint registries

## Pre-registration on OSF

- What: Time-stamped record of study design
- Why: Improves credibility, reduces hindsight bias
- How: OSF pre-registration templates
  - AsPredicted, Prereg Challenge, Standard Pre-registration
- Options to embargo

## OSF Registries

- Public, searchable repository of registered studies
- Domain-specific registries: PsyArXiv, BioArXiv, OSF Registries, etc.
- Permanent DOI links for citation
- Promotes visibility and credit for study design

# Advantages / Limitations

*Facilitates  
reproducibility*

*Centralised*

*Modular*

*Requires  
getting used to*

*Single file  
limit: 5GB*

*Public projects:  
50 GB each*

*Free of  
charge*

*Community  
support*

*Private projects:  
5 GB max*

*No storage limit  
per user*

# Thank you!
